Embedding a Link to Your LibGuide in iLearn

1. In a new tab in Firefox go to the library homepage (https://library.aus.edu). Select the “Subject Guides” or “Course Guides” tab under the “Quick Links” section. Locate and open your course’s LibGuide.

2. Scroll down to the very bottom of the LibGuide page and copy the URL.

4. Login to iLearn using your AUS credentials.

5. Find and select the appropriate course under the “My Courses” heading.

6. Using the navigation menu on the left hand side, click on the plus symbol (+) located above the course name, this will allow you to add a menu item. Select “Web Link” from the drop down menu that appears.

7. A pop-up window will appear that will allow you to enter a name and the URL for the LibGuide. Name the link and paste the LibGuide URL e.g. http://aus.libguides.com/eng204

8. Check the available to “All Users” box and click on submit.

9. A link to the course’s LibGuide will now appear as a link, under the “help” link, on the navigation menu on the left hand side.

10. To ensure that the link is visible to students, make sure that a box with a slash running through it (e.g. ) does not appear next to the link. If this box does appear, hover over the link and right click on the arrow that appears beside it. Then select the “Show Link” option. The link will now be visible to students.

11. Remember to encourage your students to visit the LibGuide page, and to utilize the resource.
